

Interview question and answer

1. what is Container?

A standard package of software—known as a container—bundles an application's code together with the related configuration files and libraries and with the dependencies required for the app to run. This allows developers and IT pros to deploy applications seamlessly across environments

What is load balancer?

Load balancing is the practice of distributing computational workloads between two or more computers. On the Internet, load balancing is often employed to divide network traffic among several servers. This reduces the strain on each server and makes the servers more efficient, speeding up performance and reducing latency. Load balancing is essential for most Internet applications to function properly.
